

## Nature Clean Drive

We are a group of 5 students aiming at creating awareness about the climatic conditions and terrestrial and aquatic lives changing for the worse. Initially, we planned about segregation of the household waste into 3 categories: plastics, paper and kitchen waste.

But we were unable to put our plan into action from the last week of February 2020, due to the Covid-19 situation, our country is under lockdown and conducting meetings and further planning was a highly difficult task. Like most of the countries, we are under lockdown. So, we were sure that majority of the people around the world would be glued to their mobile phones and passing time using social media. So we thought that spreading awareness through social media would be the next best step that we could take at this point of time.

One of the greatest disadvantages of the curfews and lockdowns around the world is that, as most people are at home, there will be a massive increase in the consumption of electricity and this will be a large loss for the world. Which only most of the global citizens will realize after the end of the pandemic. So to prevent that we have been spreading awareness among people to reduce the usage of electricity through social media. Our initial plan was to separate the biodegradable waste in our building in which we stay, for further use as manure or other nature friendly articles, which would approximately 50 flats.

To improve our work of spreading awareness, we developed a website by name <https://climatetrackers.zyrosite.com>. And we made this website known to the public through social media. This website was loaded with information on environment & climate.

Also, we created an Instagram account by the username [bhavans\\_environtechs](#) and started posting articles, videos, images with our aim of reducing different types of pollution and tips to improve climate, life on land and in water on a daily basis.

13 CLIMATE ACTION

The ever changing climate is a real concern for us , so we decided to spread awareness and try to find ways to reduce pollution of all forms.

14 LIFE BELOW WATER

Many Aquatic creatures are largely affected due to the consumption of plastic that are disposed underwater . therefore aour main aim is to promote the recycling of plastic waste, which was modified due to the covid 19 situation to spreading awareness through social media.

15 LIFE ON LAND

Our main aim is spread awareness on reduction of poaching on endangered animals and to make human and animal life sustainable .

Responsibilities of group members:

Aaron Anil Thomas	Written, Digital submission, create Instagram & posts
Andriel Remi	Developing website & Instagram Posts
Joseph Joe	Developing Website & Digital report
Kevin Prince	Developing Website & Digital report
Kiran Varghese Cherian	Developing Website & Digital report
Mohammed Mujtaba Ali	Develop Logo, Instagram Posts & Digital report
