

# Project Report: Moo Paper

As Eco-Girls, we aim to promote the production of recycled paper made from cow feces.

## Highlights:

Initially we handled the boiled and blended cow feces with gloves. Looking for a good working area, we as a team decided to work at a friend's house. We worked there for two consecutive days, occasionally taking a small break.

Most of the in-Kind donations were made by our parents. They also helped us to obtain every material we needed, except for one time in which a member's friend donated several gallons of bleach. We also obtained help from our school which provided us with wooden racks.

We covered the following sustainable development goals:

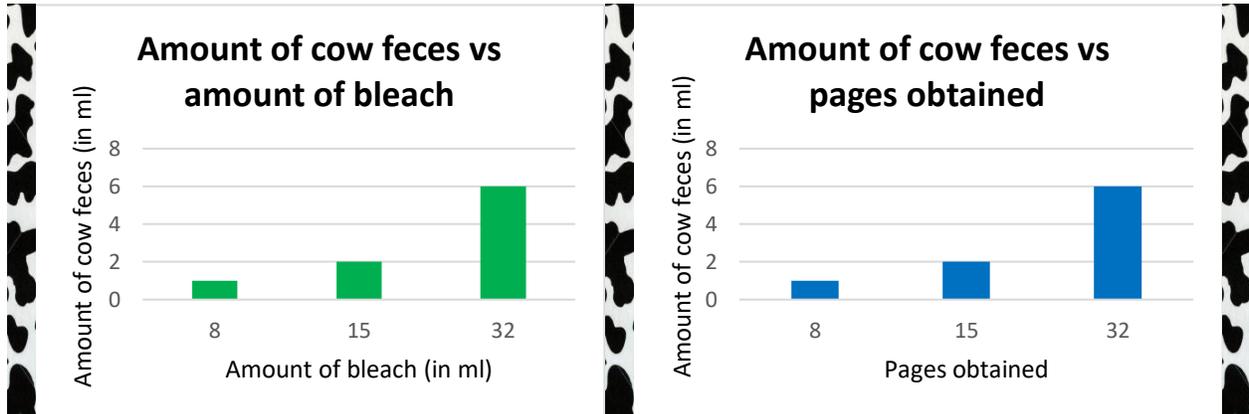

- GOAL 4: Quality Education
- GOAL 9: Industry, Innovation and Infrastructure
- GOAL 12: Responsible Consumption and Production
- GOAL 15: Life on Land

We improved our ability of teamwork. As a team, we learned how to manage things between the school and the development of a project that takes a lot of time. With the help of our teachers, we learned how to write a journal properly.

During the development of our ecologic pages, we gained skills such as: how to use an Erlenmeyer flask, how to take samples depending on the substance, how to weigh heavy substances such as cow feces and also how to make paper from alternative raw materials.

# Project Development and Final Results
