

A vibrant still life composition of various fresh foods. In the foreground, there are several bright orange carrots, a bunch of green asparagus, and a whole red fish. To the left, a woven basket is filled with dark brown almonds. In the center, a dark circular overlay contains the title text. Surrounding the circle are various other items: a glass jar with dried citrus slices, a loaf of bread, a small glass bottle of white liquid, a piece of red cheese, a head of cauliflower, and a burlap sack filled with light-colored grains. The background is a warm, golden-brown color, creating a rich and appetizing atmosphere.

HOW TO REDUCE FOOD WASTAGE

By Aniket

WHAT IS THE ISSUE

Huge quantity of food gets wasted

But still over 690 Mn people are not getting enough nutritious food

People with money don't care if they waste food

All countries waste food - Like in America, belgium, UAE.

Idea of how much food is wasted in the world.

In the world there is around 1.3 billion tonnes of food wasted every year.

There is around 280 million people every day that are left hungry.

US wastes the most food they waste around 40 million tonnes of food per year, but for the size Belgium waste the most amount of food.

Philippines on the other hand waste the least amount of food

Just in the US they waste around 160 billion\$ due to food wastage.

Almost everyone that has been hungry could be fed with just the food wastage of US, UK and Europe.

HOW MUCH FOOD IS BEING WASTED IN THE UAE

Roughly, 38% of the food prepared every day in the emirate is wasted, which jumps to around 60% during Ramadan.

The total amount of food imported to the UAE is Dh 13 Billion out of that nearly Dh 3.45 Billion is wasted due to food wastage

In Dubai alone, 365,000 tons of food is wasted over one year.

Recent research has found that restaurants are the main source of food waste in the UAE is the restaurants, contributing 32 per cent of the total. This is followed closely by excess food cooked for celebrations, which accounts for 30 per cent.

My big idea

**To successfully develop a habit
among consumers to order as much
one can eat in a restaurant**

ACTION!

To do this i have to-

1. Inform the government about my idea
2. Inform the restaurants about my idea
3. Inform the customers what has been happening

Action Plan

Government

People part of the government must be wondering what is it in for us?

We know now that the restaurants waste the most amount of food, so to reduce food wastage i would like to give discounts to people that have finished everything that they have ordered.

The restaurants would only agree to this idea if they get some money, we would like the government to give that money.

The government would be giving the money as they would save a lot of money, because out of the money you import which is Dh 13 billion and 3.54 billion is getting wasted you could just import around Dh 10 billion. That Dh 3 billion you save you could spend to give to restaurants.

حكومة دبي

GOVERNMENT OF DUBAI

Restaurant

So now the restaurant people would think what's in for us?

All we want for the restaurants to do is to put discounts to people that finish what they have ordered.

You would do this as you would get money back from the government of what you have discounted.

You can't give discounts to the people that pack the food or order from home as we don't know if they finish their food.

Also you can't give a discount to the people that don't finish their plate in the restaurant itself.

HOW DOES THIS LINK TO LEADERSHIP?

This links with leadership very well as i have a vision, and trying to bring everyone to act upon this issue.

The rest of you

It is not only the government, the restaurants it is also the rest of you.

This idea can come into action if you don't waste your food.

Before you start wasting your food think about the hungry people, the 280 million people who don't get food everyday.

People that dont care about any discount please do care about the poor.

THIS PLAN CAN'T WORK WITHOUT YOU!!!
