

The Covid Protection Bag

Light for Life: Written report

The pandemic situation has affected all of our lives. Staying safe has suddenly become our top priority. The Covid Protection Bag, developed by Team Auxilium, consisting of Rithika Brijesh and Liah Murali, aims to provide protection by equipping people with a product that will allow them to follow all the restrictions for staying healthy, especially the ones in place today. We wish to help them socialize with ease. We aspire to reduce their vulnerability to contagious diseases, like the Coronavirus. We aim to create a solution to the problem of safe socialization during sickness. With 'Light for Life', we aim to light up people's lives by keeping the threat of diseases and sickness at bay, with our innovative idea.

Liah Murali

Rithika Brijesh

Working on our project 'Light for Life' has been a wonderful and enlightening experience for us.

It has allowed us to learn more about many topics, (like robotics, communicable diseases, making infographics, working on a project without meeting up, navigating social media) and improve our collaboration, research and technological skills.

To advertise our product and spread information about it, we have created accounts on social media platforms like Twitter (@AuxiliumGsl), Instagram (auxilium.cpb), Facebook (Auxilium Cpb) YouTube (Auxilium GSL). We have also designed a website to advertise our product idea.

Our innovation: We have used automation and AI to create our product.

Impact: A video about CPB was shown in the school exhibition, which received more than 700 views. The product was introduced to the class during library period, and feedback was gathered. We received feedback and support through our website, Instagram and WhatsApp. We used our bag while going outside, and introduced it to many people.

This experience has been an unforgettable one, due to the unwavering support and encouragement of our peers and teachers. We have immensely enjoyed introducing our bag to people and creating collages and posters for our project. We enjoyed developing the Covid Protection Bag, and improving our prototype based on the suggestions we received. We have strived to create videos and reports about our project, and we co-operated to inform people about CPB and spread the word. We researched and collaborated to turn our bag into an innovative and creative product that combines different gadgets into one capable and practical accessory.
