Global Social Leaders 2021 - 2022

Who We Are!

Go Green Thumbs is a student-led **environmental awareness** group. We aim to spread awareness on environmental issues such as deforestation and climate change. We want to show that despite only being high school students, **we can make a difference.**

We hope to **shed light on these sensitive situations** and hopefully inspire students, teachers, parents, and more to do the same.

Our SDGs!

- SDG 13: Climate Action
- SDG 15: Life on Land
- SDG 17: Partnership for the Goals

Our Motto!

"Only One Earth, One Habitat, One Home."

Meet The Team!

Social Media Manager

Project Puno Tree!

Project Puno Tree aims to spread awareness, educate people, and address the alarming issues of deforestation by reforesting parts of the Philippines.

Projects like Root and Pursuit, where we have been **spreading awareness** about current environmental issues the world is facing through posting simple yet educational posts about problems that the world is going through and what has been done to fix these issues.

Think Green N Clean was our **seminar** where we were able to invite a guest speaker to share her experiences working as an **environmental engineer**. She gave us tips on how to help the Earth as students who are eager to help change the way we take care of our planet.

Our final project was Plant for the Planet, where we hosted a **garage sale** to **raise funds to plant more trees**. We sold home-cooked food and items from our homes that we were no longer using.

With all this, we have been able to accomplish our goal of spreading awareness and educating others about the importance of reforestation and keeping our Earth clean and green.

Impact And Outcome!

Think Green N Clean: We were able to educate people through a webinar. During our webinar, we discussed what has been damaging our environment and how we can help. We also invited a guest speaker, Miss Jessy, an environmental engineer. She gave a background of what she does and how they have projects that focus on improving damaged habitats for animals living in the forests.

Root and Pursuit: We reached about 600 people by posting on our Instagram account. Our followers were able to view educational posts and updates on our projects. We were also able to raise funds (23,000 pesos) through our posts for our tree planting project.

Plant for the Planet: We were able to host a garage sale that raised funds (10,000 pesos) for us to plant more trees with One Tree Planted, a non-profit tree-planting organisation. This project influenced others that doing the little things such as selling used items or selling home-cooked food for a good cause is a simple way to help the planet.

Setbacks!

A significant setback for us was the pandemic. Due to this, most of our projects had to be done online, and we had to delay our garage sale a few times due to cases rising in our country. Despite this, we could still find creative and inclusive ways to go about our projects. Once our group got vaccinated, we were able to reschedule the garage sale that helped us raise funds for our tree planting project.

Time management was also a big struggle for our group as we would cram some of our tasks. We were able to recover from this by making a google planner where we would set dates for meetings and days we would need to finish specific tasks.

Communication played a significant role in time management as we needed to vocally remind each other and share our plans and ideas for our projects.

Learnings & Skills!

Planning & Organising: We were able to pick up these skills with the amount of time we would spend drafting our plans for some projects we were working on. It helped us identify our goals clearly.

Communicating: We were able to improve our skills in communication when we had to share ideas and opinions on some of our projects.

Creativity: We were able to improve our creativity by thinking outside of the box; we mainly had to do this because we were all online and could not meet up in person consistently.

Highlights!

- Raised 33,000 pesos (\$632) and planted 660 trees
- Reached 670 followers on Instagram
- Donated \$100 to the victims of the volcanic eruption in Tonga

thank you
