

Sustainable Evolution

Progressive perspectives, bold actions, and a wish to tangibly foster change in the community around us, are the foundations of our projects. It is a space that has advanced by utilising our resources and potential to its best, in order to support the emergence of an evolving India. By encouraging students, we have founded various organisations and are working on multiple projects with them. Here are a few ongoing ones.

दवा, सैनिटाइजर्स का वितरण

डेली न्यूज, mix रिपोर्टर, जयपुर। स्टूडेंट्स की ओर से तैयार की गई गैर सरकारी संस्था 'दो मुझे का दम' की ओर से निरोग कार्यक्रम आयोजन के तहत जरूरतमंदों को दवा, सेनिटाइजर व मास्क का वितरण किया गया। इस संस्थान के जिरए युवा मेंबर्स हर माह ऐसे कार्यक्रम आयोजित करते हैं। इसी कड़ी में मेंबर्स ने जगन्नाथपुर पंचायत से जुड़े गांवों में फ्री मेडिकल कैम्प का आयोजन किया गया। हॉस्पिटल ईएचसीसी की मेडिकल टीम के साथ जुड़े युवाओं ने गांवों के लोगों के बीच स्वच्छता और साफ सवाई का महत्व साझा किया।

Do mutthi ka dum

Through actively addressing sustainable development goals of clean water and sanitation and good health and wellbeing under an organisation called "Do Mutti Ka Dum", we have been driven since 2018 to create a large-scale impact.

We were able to integrate about 100 student volunteers from our school and through crowdfunding, raised a hefty sum of over £36,376.28 which was used to create North India's only open-defecation-free village, Pali by building 110+ toilets. Last year during the global pandemic, we donated medicines and provided free checkups to the underprivileged. While these projects continue to progress till date, we are also planning water restoration in the very same village.

Through these 2 projects and our upcoming project we were able to integrate our research skills, learnt better communication and grew into our roles as leaders while growing into more responsible citizens. Through these projects we gained deeper insight on the needs of communities surrounding us and an understanding of how the facilities we consider basic and overlook, are the cause immense hardships for some. We tied up with doctors from EHCC hospital as well as the local govt in order to provide the check ups and treatment for villagers. For these efforts we were acknowledged in local newspapers as seen above.

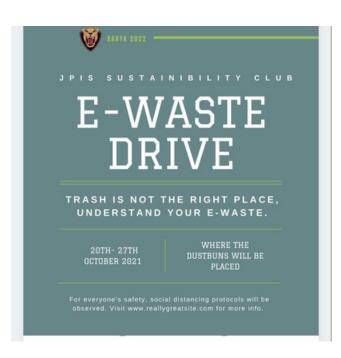

School Based Sustainability

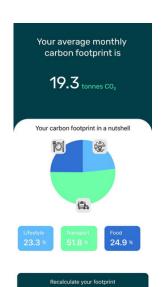

Being the leaders of our student council we undertook multiple projects to make our school campus as well as public schools more sustainable.

To segregate waste in our school we placed wet and dry waste bins around our campus including the cafeteria, after holding seminars to educate the student body. The dry waste is being recycled while the wet waste is composted. Additionally, we've taken a step closer to making our school campus 100% sustainable by installing solar panel Recently we held an e-waste drive in our school and over 200 students donated their used batteries, laptops and phones. We plan to refurbish some of the waste collected and distribute it to public school students to facilitate their online learning.

Through the e- waste drive we were able to increase the quality of education through educating school students about waste segregation and helped dispose their e waste in a safe manner.

Sustainability App

We're also in the process of launching our application, whose purpose is to emulate a self-sustainability guide for anyone wanting to start their sustainable journey. On our app, we begin by prompting a series of closed-ended questions to the user, the answers to which determine the sustainability stage a user is on. Our app is designed to cater specifically to the users needs by then following them up with potential steps they could adopt towards being more sustainable than they already are. A problem we encountered while testing our app was tweaking and orientating our suggestions as closely as possible to the user. Later, however, using our analytical, critical thinking and research skills, we were able to tackle it as we switched our sustainability guide to a more generic one.

The global sustainable goals that we targeted through this app are climate action, sustainable cities and communities and quality education. We hope to impact the daily lives of people in order to live more sustainable lives. Out of our team each of us have spent an approximation of 20 hours on this project, coding, deciding marketing strategies and designing the interface.

We also plan on partnering with the following firms- Aadhan, Dailydump and Navaltboats
